

# XpressScan

*Converts checks to compliant images to securely transmit them to your bank accounts*

## Automate Your Check Handling Environment

Bring greater efficiency and control to check transactions with the XpressScan application, a Check 21-compliant solution that creates and sends industry-standard X9 deposit files to your designated banks each night.

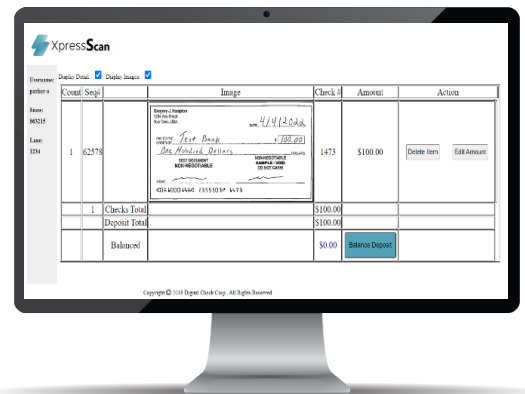

This web-based solution easily integrates into your retail environment. XpressScan works with single-feed or batch check scanners from Digital Check®, which require no installed software or browser add-ons.

### Streamline workflows

XpressScan was designed for businesses that need to keep track of multiple deposits by multiple employees. With its best-practices-based, automated workflow, XpressScan streamlines and secures check handling.

The solution's bank-grade check-capture functionality – including MICR verification and editing, duplicate detection, image quality analysis and adjustment – gives you peace of mind that transactions are compliant and adhere to the bank's processing rules. Plus, you'll benefit from the solution's ability to:

- Enforce role-based rules for cashiers and supervisors, as well as provide administrative functions to reinforce security and accountability
- Present check deposit totals to balance to the POS at the cashier, lane and store level
- Reduce exceptions and end-user interaction with its robust IQA engine and legal/courtesy amount recognition

## How XpressScan works

With this intuitive workflow featuring on-screen prompts at each step of the deposit process, XpressScan makes end-of-day balancing faster, easier and accurate:

1. XpressScan prompts the user to enter the check deposit amount from the POS system by cashier, lane or store total.
2. Checks are captured on the Digital Check scanner using the XpressScan application.
3. XpressScan displays a final balancing screen to the operator for confirmation that all the checks are captured and the deposit is in balance.
4. Finally, upon confirmation that the deposit is in balance, the XpressScan system creates a bank-specific X9.37 file and securely transmits it to the financial institution for posting — it's that easy!

## Gain greater control with a complete, integrated solution

XpressScan works on the XpressControl™ platform, integrating with the XpressCash™ solution driving smart safes and cash recyclers for a complete transaction automation solution.
