Avivatech LLC Achieves SOC 2 Type 2 Compliance Certification

ALPHARETTA, Ga., May 15, 2023 – [Avivatech LLC](#), an innovative software business specializing in cash and check automation solutions for branch banking and retail payment environments, announced today the successful completion of its Service Organization Control (SOC) 2 Type 2 certification, which demonstrates compliance with the rigorous security standards established by the American Institute of Certified Public Accountants (AICPA). By opting to undergo this voluntary audit, Avivatech maintains its competitive advantage and further affirms its long-standing commitment to the highest level of data security.

SOC 2 is a technical auditing process that measures the effectiveness of an organization's safeguards and controls over its data processing systems. The evaluation process can cover both customer-facing applications and a company's systems and protocols for handling data internally. SOC 2 Type 1 certification confirms the existence of appropriate internal controls that meet the [AICPA](#) Trust Services Criteria for security at a given point in time; SOC 2 Type 2 certification involves a more rigorous audit that tests those processes over a period of at least six months.

Avivatech was first granted SOC 2 Type 1 certification for security in November 2022, and in the intervening months the company's processes and controls were tested and verified by a team of independent auditors to validate the effectiveness of its security practices.

"Earning SOC 2 Type 2 certification is a major milestone for our company and an important indicator of how seriously we take platform security," said Jeff Hempker, President, Avivatech. "This further validates that we are doing all the right things to maintain the security of our software solutions and internal systems and protocols. And we'll continue to invest in our security infrastructure to ensure that our customers can trust our solutions."

In the face of ever-evolving cyber threats, organizations want to know that their systems are secure. While Avivatech continues to focus on offering best-in-class cash and check automation solutions, the successful achievement of the SOC 2 Type 2 certification makes Avivatech a validated secure choice for retailers and financial institutions.
